Madeira Botanical Group (GBM), University of Madeira, Funchal, Portugal

Macaronesian seminar Azores, Terceira, Angra do Heroísmo, 8<sup>th</sup> - 10<sup>th</sup> of November 2023

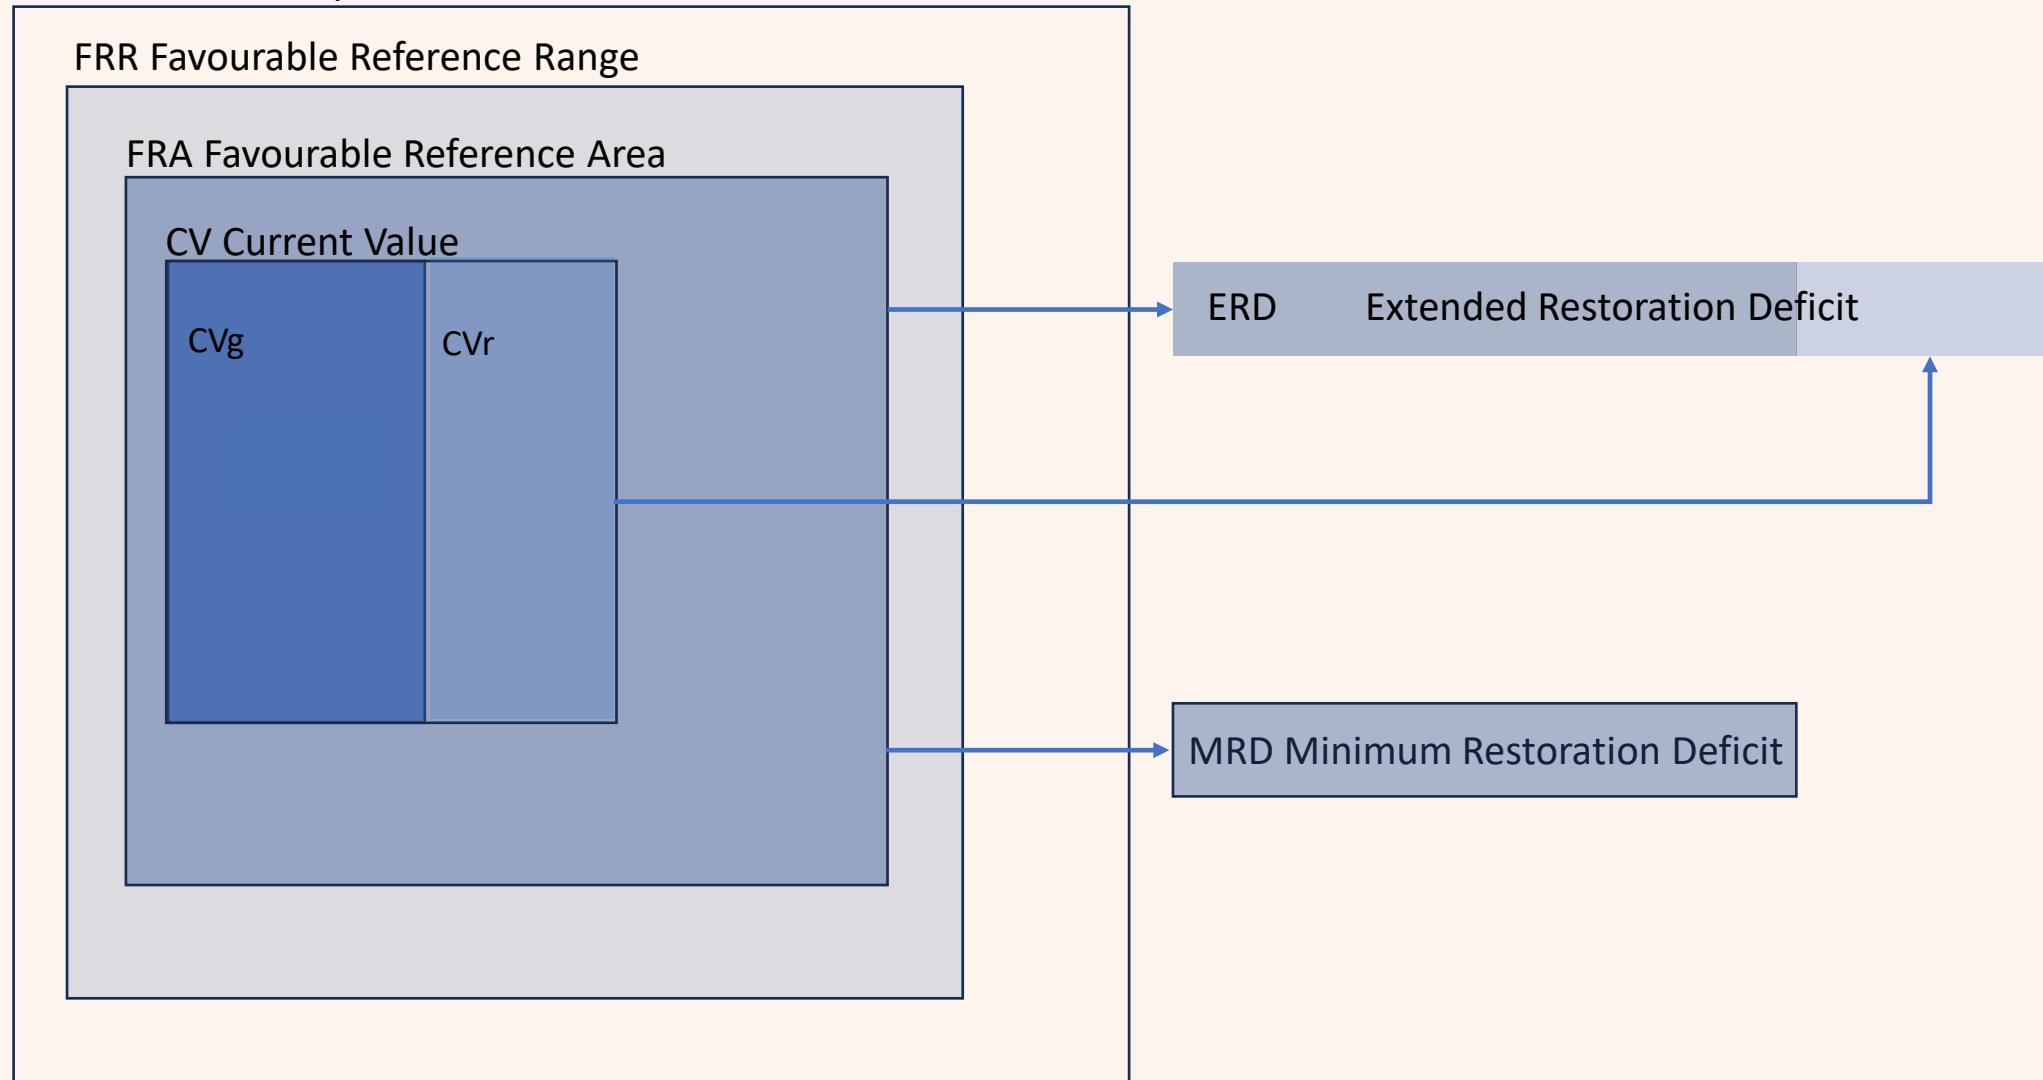

FRV are the minimal proportions of range/area that, in principle, allow the global viability of the habitat

**Table 2.1** Definitions of favourable reference values by the Habitats Committee in 2004 (European Commission, 2005)

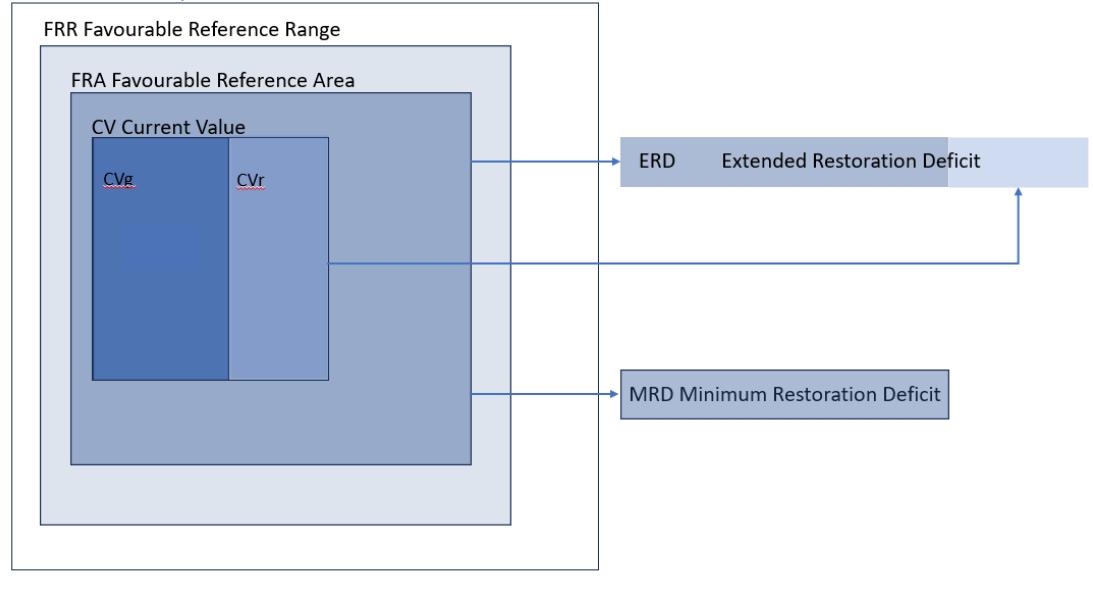

FRV	Definition
FRR	Range within which all significant ecological variations of the habitat/species are included for a given biogeographical region and which is sufficiently large to allow the long term survival of the habitat/species; favourable reference value must be at least the range (in size and configuration) when the Directive came into force.
FRA	Total surface area of habitat in a given biogeographical region considered the minimum necessary to ensure the long-term viability of the habitat type; this should include necessary areas for restoration or development for those habitat types for which the present coverage is not sufficient to ensure long-term viability; favourable reference value must be at least the surface area when the Directive came into force.

## FRV proportions of range/area differentiate by potential, actual and ecological quality (conservation status)

AT Area of Territory

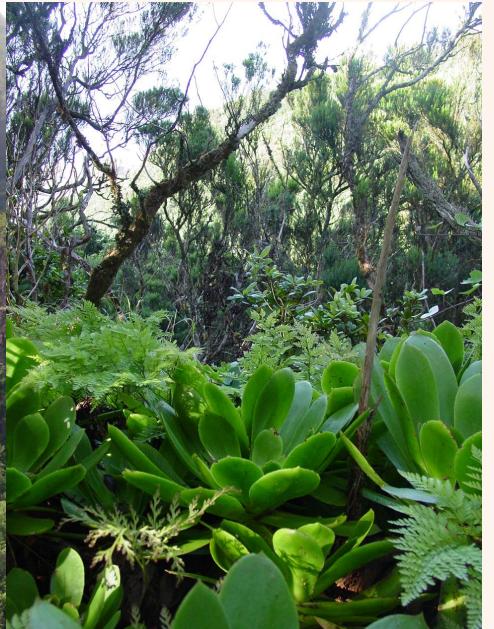

## AT Area of Territory

FRV – Favourable Reference Values ( of areas of habitat) :

1. FRR Favourable Reference Range
2. FRA Favourable Reference Area (*minimum FRA area or proportion FRA/FRR viable*)
3. CV Current Value
4. CVg Current Value in good Conservation Status
5. CVr Current Value not good CS, but restorable
6. MRD Minimum Restoration Deficit  $MRD = FRA - CV$  or  
 $MRD = FRA - CVg - CVr$
7. ERD Extended Restoration Deficit  $ERD = MRD + CVr$
- 8. Repeat for every sub-type [goto #1]**

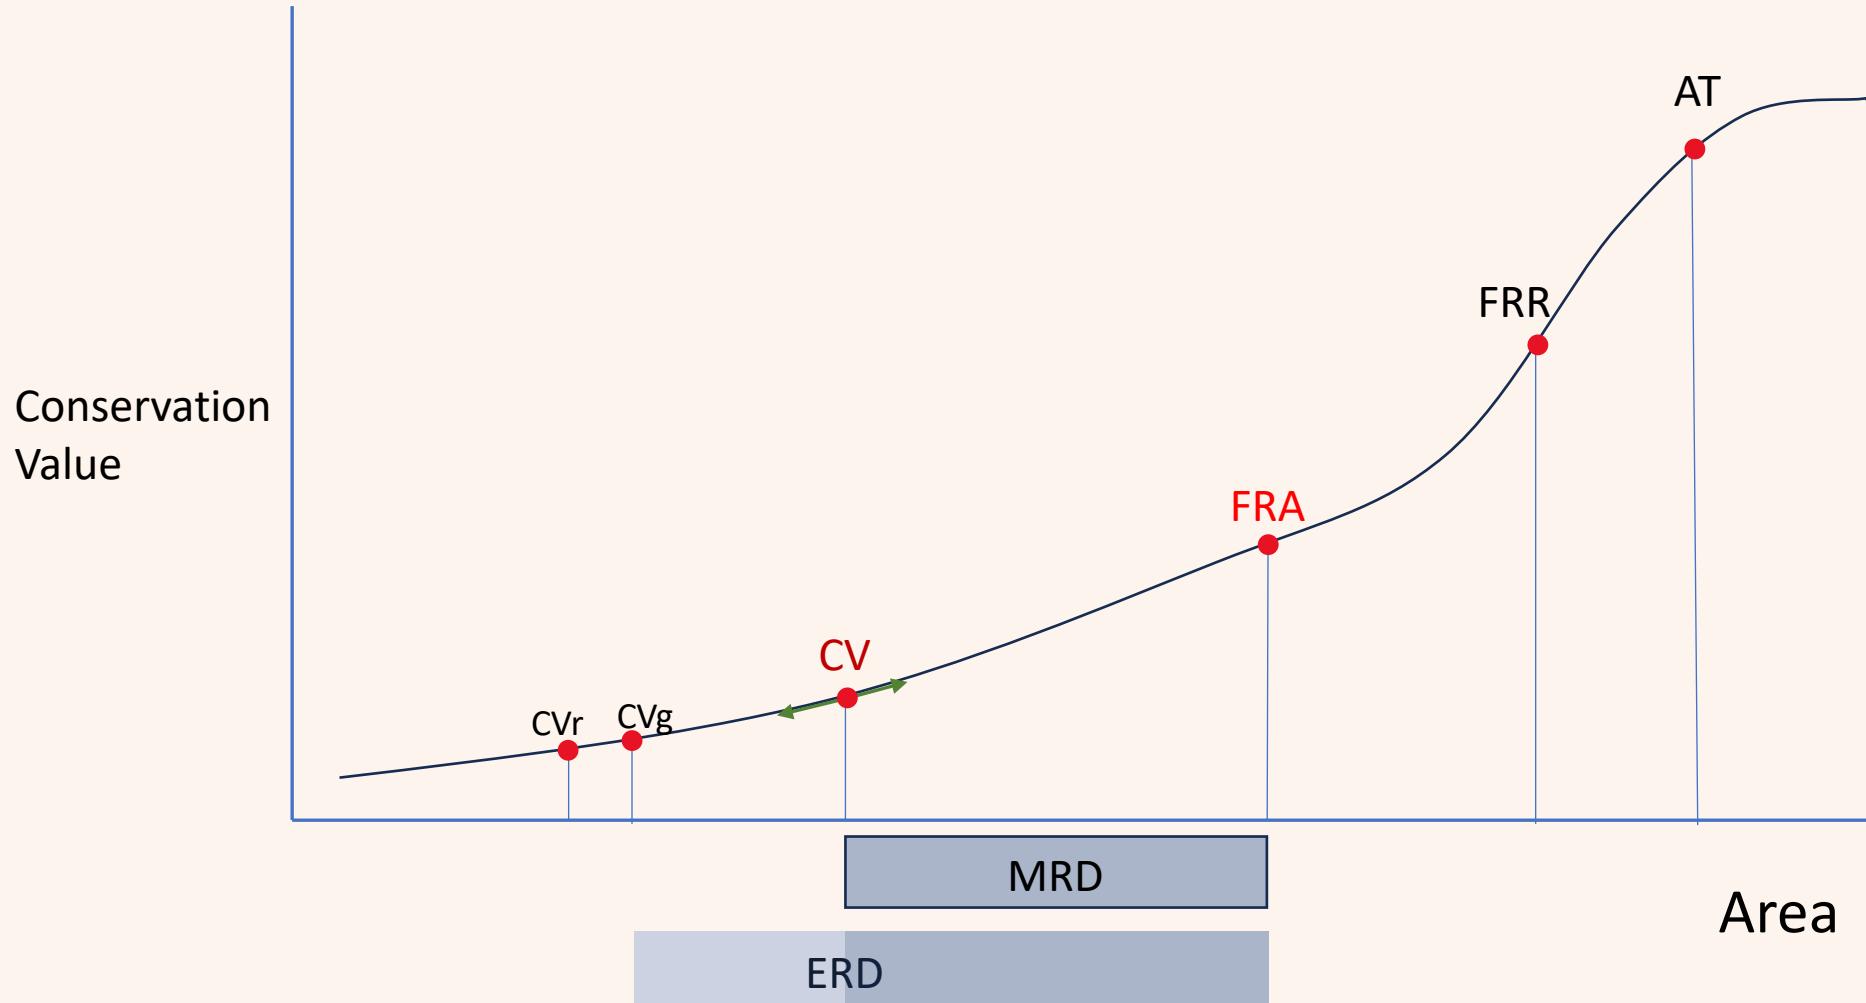

Picconia forest Azores

Laurus – Ilex forest Azores

Ocotea forest Madeira

Arbutus forest Canaries

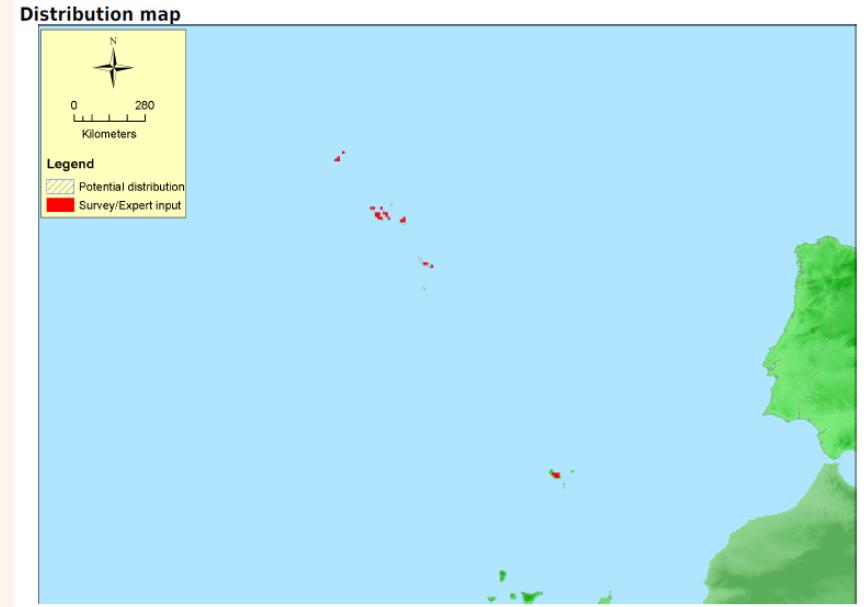

## FRV – Area criteria

## FRV assessment SOURCES

1. FRR
  - a) *EOO Extent of Occurrence*
  - b) *NPV Natural Potential Vegetation*
  - c) *SDM Species [habitat] Distribution Models Maxent*
  - d) *historical references*
2. FRA
  - a) *IUCN 'vulnerable'*
  - b) *cf. RED List habitats of Europe*
  - c) *keystone population or functional - based*
  - d) *minimal-area methods*
  - e) *Probabilistic methods*
  - f) *expert judgement*
  - g) *connectivity models*
3. CV Current Value
  - a) *land use*
  - b) *remote sensing*
4. CVg Current Value in good Conservation Status
  1. *in-field assessment*
  2. *Remote sensing*
5. CVr Current Value not good CS, but restorable [*idem 4*]

Extent of Occurrence, Area of Occupancy and habitat area				
	Extent of Occurrence (EOO)	Area of Occupancy (AOO)	Current estimated Total Area	Comment
EU 28	107950 Km <sup>2</sup>	28	8 Km <sup>2</sup>	
EU 28+	107950 Km <sup>2</sup>	28	8 Km <sup>2</sup>	

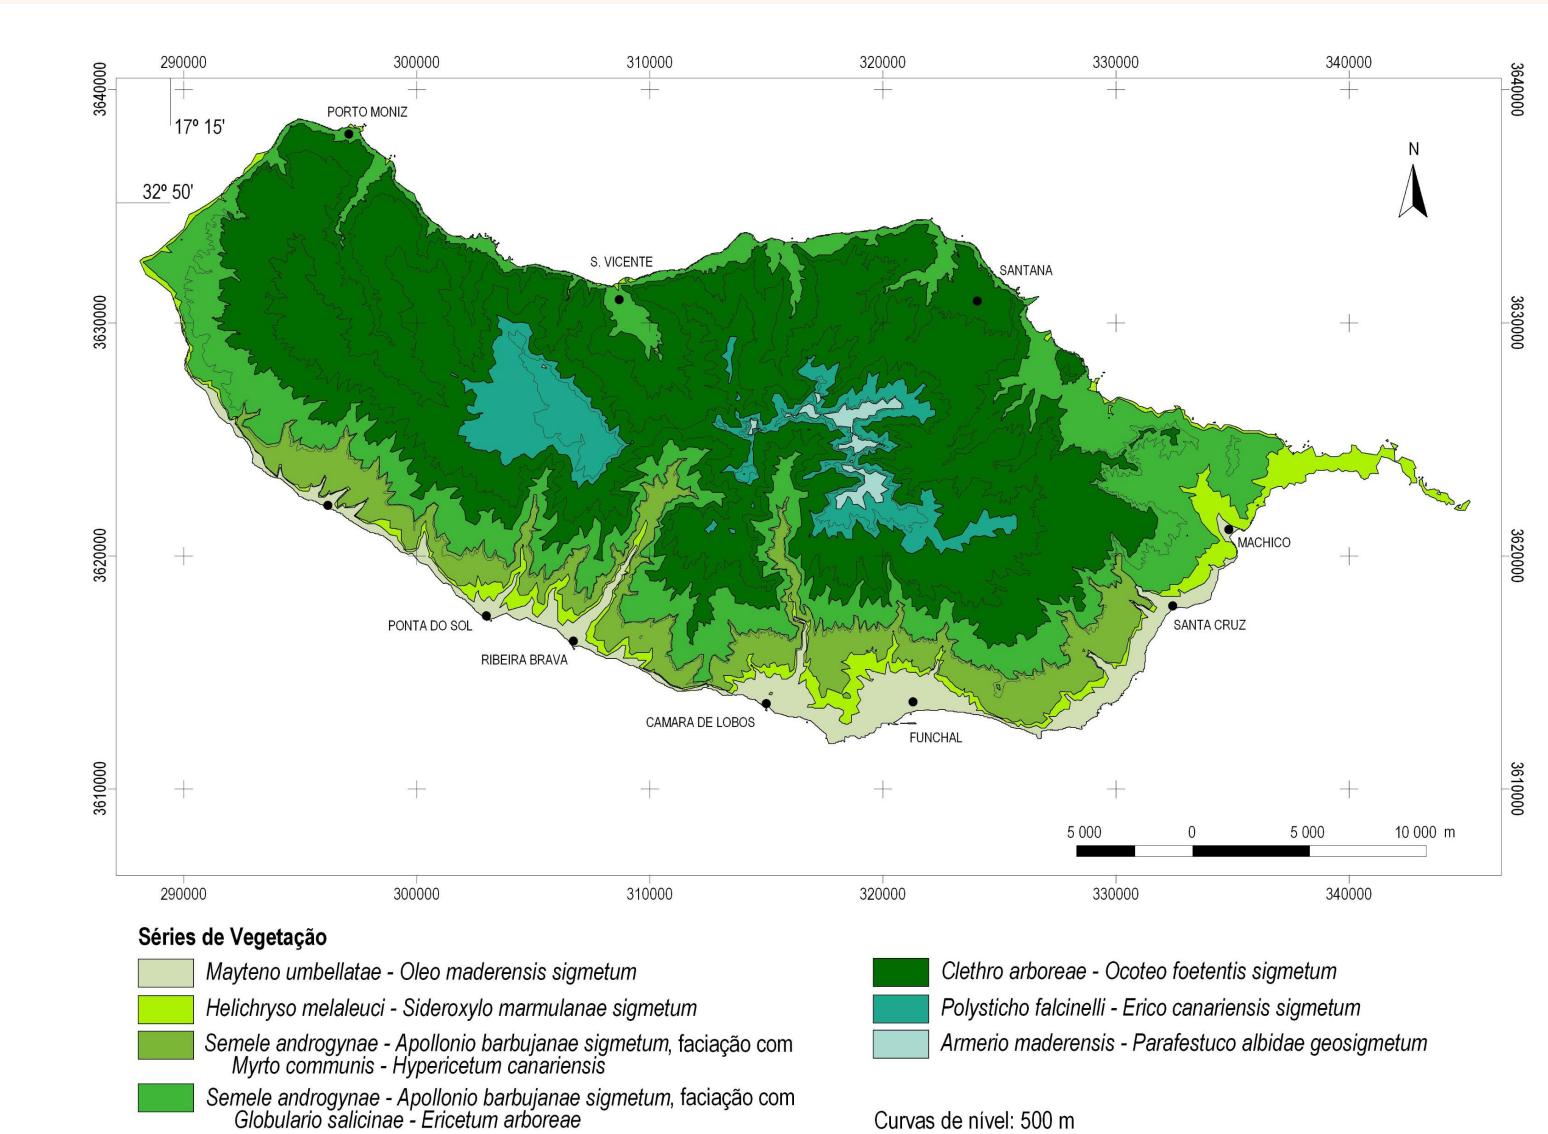

Criterion A: Reduction in quantity				
Criterion A	A1	A2a	A2b	A3
EU 28	-53 %	stable %	stable %	>-50 %
EU 28+	-53 %	stable %	stable %	>-50 %

Overall Category & Criteria
