Prescribed burning in protected forest areas: containing risks while maintaining biodiversity

Foto: Ulrika Mogren

This event will discuss the role of prescribed burning in the management of forest ecosystems, both in terms of its importance for biodiversity and its potential to mitigate the risk of more catastrophic wildfires. The event is online and will take place in the form of two half day sessions.

Fire is and has been an essential element of many European ecosystems. A surprisingly large number of species, some of which protected under the EU Habitats Directive and its Natura 2000

Networking events: strictly protected areas

Natura 2000 Biogeographical Process

- Event on 'strict protection', in view of the protected areas pledge (Biodiversity Strategy), including also old-growth forests etc.
- Discussing aspects of strict protection in various regions in Europe.
- All biogeographical regions
- Live event, probably October 2024
- In Brussels, Committee of the Regions
